

INDEPENDENT SERVICE AUDITOR’S REPORT
SOC 2 Type II Report on Management’s Description of a Service
Organization’s System
and the Suitability of the Design and Operating Effectiveness of Controls

For the Period April 1, 2025 to March 31, 2026

Issued: May 12, 2026

Independent Auditor: Granite Peak Assurance & Risk Advisory LLP

Service Organization: Sentrix Cyber Solutions LLC

System Under Evaluation: Unified Payment Gateway Platform

To the Management of Sentrix Cyber Solutions LLC and the Users of Sentrix Cyber Solutions LLC’s Unified Payment Gateway Platform:

We have examined management’s assertion that Sentrix Cyber Solutions LLC (the “Service Organization”) maintained effective controls over its Unified Payment Gateway Platform (the “System”) based on the Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy (the “Applicable Trust Services Criteria”) for the period April 1, 2025 to March 31, 2026. Management is responsible for its assertion and the design, implementation, and operation of the controls. Our responsibility is to express an opinion on the fairness of the presentation of management’s description and the suitability of the design and operating effectiveness of the controls.

1. Scope

The System consists of the infrastructure, software, people, procedures, and data necessary to provide payment authorization, settlement, and transaction routing services to clients such as Helios Capital Markets N.V..

2. Opinion

In our opinion, except for the matter described in the Trust Services Criteria Exceptions section of this report, the controls stated were fairly presented and operated with effective efficiency throughout the review period.

3. Management’s Description of the System

[Management’s description of the system, policies, and procedures has been included in the full report and is fairly presented in all material respects.]

4. Testing of Operating Effectiveness

We performed tests of the operating effectiveness of controls over the Applicable Trust Services Criteria. The nature, timing, and extent of testing performed are described in the accompanying Test of Controls matrix.

5. Trust Services Criteria Exceptions

The following exceptions were noted during our testing:

Criteria	Exception ID	Description
Security and Confidentiality (CC6.3)	CC6.3-07	Testing of a random sample of 30 production servers revealed that automated cryptographic key rotation routines failed to fire at the required 90-day intervals. 6 core database instances were running keys older than 275 days due to a mis-configured cron scheduler that silently failed after a credential rotation.

This exception represents a deviation from the control objectives related to cryptographic key management and secure data protection practices within the Core Production Infrastructure.

6. Management's Response

Sentrix Cyber Solutions LLC management acknowledges the identified exception related to cryptographic key rotation. A manual remediation process was implemented immediately upon notification. Full system compliance with automated key rotation controls was restored on June 8, 2026. Management has enhanced monitoring and alerting mechanisms to prevent recurrence and will conduct a comprehensive review of all related system scripts.

7. Other Information

This report is intended solely for the information and use of Sentrix Cyber Solutions LLC management, its clients (including but not limited to Helios Capital Markets N.V.), and other specified parties who have a business relationship with Sentrix Cyber Solutions LLC and who are subject to the Applicable Trust Services Criteria. This report is not intended for any other purpose.

The report, including any exceptions noted, does not provide any assurance regarding future periods. Controls are subject to inherent limitations, including the possibility of management override.
