

INDEPENDENT SERVICE AUDITOR'S REPORT

SOC 2 Type II Report on Management's Description of a Service Organization's System

and the Suitability of the Design and Operating Effectiveness of Controls

For the Period April 1, 2025 to March 31, 2026

Issued: May 15, 2026

Independent Auditor: Apex Assurance & Risk Advisory LLP

Service Organization: NimbusPay LLC

System Under Evaluation: Core Distributed Transaction Processing System

To the Management of NimbusPay LLC and the Users of NimbusPay LLC's Core Distributed Transaction Processing System:

We have examined management's assertion that NimbusPay LLC (the "Service Organization") maintained effective controls over its Core Distributed Transaction Processing System (the "System") based on the Trust Services Criteria for Security, Availability, Processing Integrity, Confidentiality, and Privacy (the "Applicable Trust Services Criteria") for the period April 1, 2025 to March 31, 2026. Management is responsible for its assertion and the design, implementation, and operation of the controls. Our responsibility is to express an opinion on the fairness of the presentation of management's description and the suitability of the design and operating effectiveness of the controls.

1. SCOPE

The System consists of the infrastructure, software, people, procedures, and data necessary to provide high-volume card processing, real-time authorization, settlement, and transaction routing services to clients such as Société Générale International S.A.

2. OPINION

In our opinion, except for the matter described in the Trust Services Criteria Exceptions section of this report, the controls stated were fairly presented and operated with effective efficiency throughout the review period.

3. MANAGEMENT'S DESCRIPTION OF THE SYSTEM

[Management's description of the system, policies, and procedures has been included in the full report and is fairly presented in all material respects.]

4. TESTING OF OPERATING EFFECTIVENESS

We performed tests of the operating effectiveness of controls over the Applicable Trust Services Criteria. The nature, timing, and extent of testing performed are described in the accompanying Test of Controls matrix.

5. TRUST SERVICES CRITERIA EXCEPTIONS

The following exceptions were noted during our testing:

Criteria	Exception ID	Description
Security and Confidentiality (CC6.3)	CC6.3-04	Testing of a random sample of 25 production servers revealed that automated cryptographic key rotation routines failed to fire at the required 90-day intervals. 8 core database instances were running keys older than 320 days due to an unpatched system script error.

This exception represents a deviation from the control objectives related to cryptographic key management and secure data protection practices within the Core Production Infrastructure.

6. MANAGEMENT'S RESPONSE

NimbusPay LLC management acknowledges the identified exception related to cryptographic key rotation. A manual remediation process was implemented immediately upon notification. Full system compliance with automated key rotation controls was restored on June 1, 2026. Management has enhanced monitoring and alerting mechanisms to prevent recurrence and will conduct a comprehensive review of all related system scripts.

7. OTHER INFORMATION

This report is intended solely for the information and use of NimbusPay LLC management, its clients (including but not limited to Société Générale International S.A.), and other specified parties who have a business relationship with NimbusPay LLC and who are subject to the Applicable Trust Services Criteria. This report is not intended for any other purpose.

The report, including any exceptions noted, does not provide any assurance regarding future periods. Controls are subject to inherent limitations, including the possibility of management override.
